

Fuji Spray Drying Newsletter

Vol 1: Fuji Spray Drying Service Overview

Get to know the forerunner of pharmaceutical spray drying

Over 50 years of Spray Drying Experience

Fuji's history of pharmaceutical spray drying started in 1965 with an open spray dryer (OSD.) Fuji moved on to a new category of expertise in 1998 with the installation of the first closed cycle spray dryer (CSD). Over the years, Fuji has manufactured more than 100 products for the customers.

Wide Range of Equipment and Service

From the bench-top scale spray drier to the commercial scale GMP facility, Fuji is equipped with a wide range of apparatus to serve you. Our technical team can support you from the initial formulation study for the spray dried powder to commercial production scale-up. We also have API production facilities and high-containment spray driers to match a variety of needs.

Dedicated Teams

We have not only the group of engineers to ensure your smooth development and manufacturing but also the dedicated QC and QA team to help you with the analytical work and GMP documentation. Our U.S. team and Japan team work around the clock to make sure your project is delivered on time

In this issue of our technical newsletter, we have provided a very brief overview of our equipment and service. For more details, please contact our U.S. office below:
